- Providers

The Ontology-Based Approach

Multi-linguality

Оферта за Череша

Количество (Amount)

Тона (tons)

Цена на тон (Price per tone)

Евро (Euros)

Описание на офертата:

Offer Description in English:

Информирайте ме при постъпване на търсения за предлаганата от мен стока. (Send me a notification when a match occurs.)

The MALL2000 Broker

- Supports b-to-b match making
- Supports supply/demand exchange
- Multi-lingual
- Provides automatic matching & notification
- Includes precise filtering capabilities

Based on ontologies, which structure the information space by classifying and describing the types of business offers & requests.

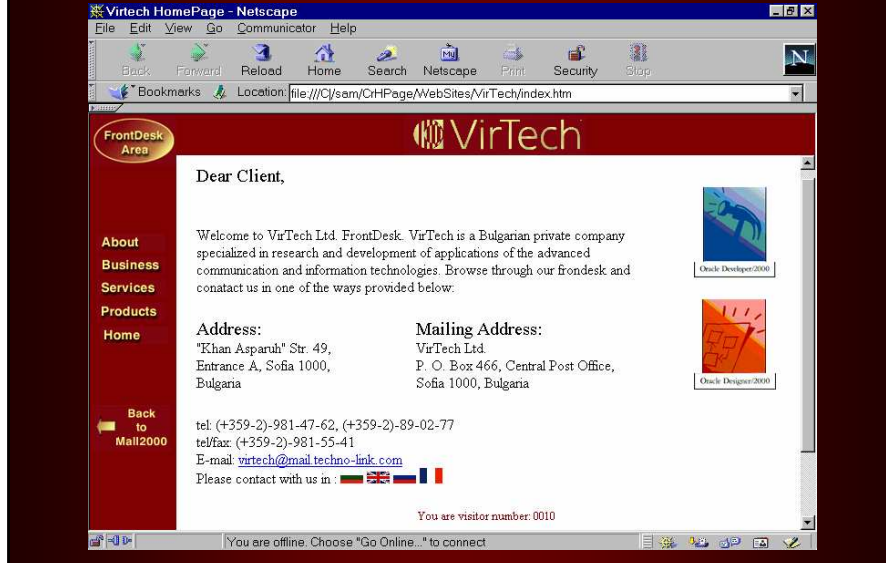

Management of Suppliers and Products

Supplier Frontdesk :

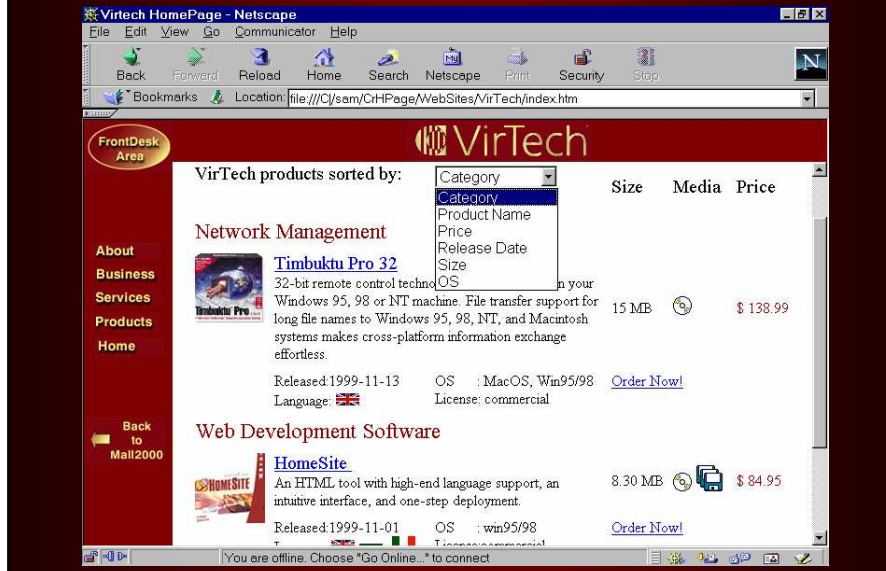

- Detailed supplier information
- Supplier's advertisements (e.g. banners)
- Special offers
- Product & service catalogue

Business-to-Business Search

Management of Suppliers and Products

Management of Suppliers and Products

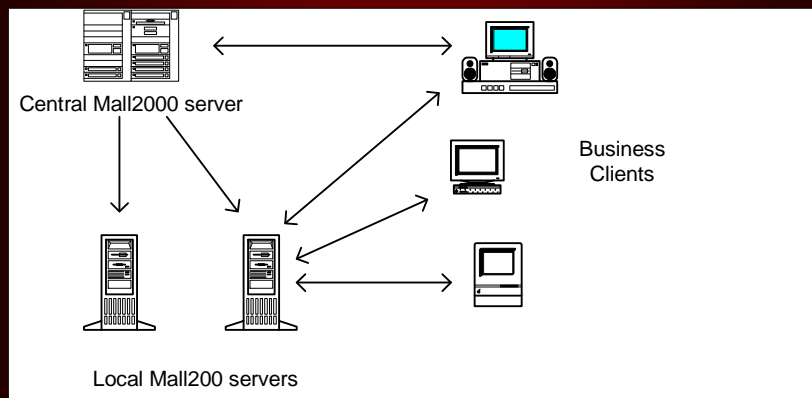

MALL2000 Application Model

MALL2000 will be implemented using a :

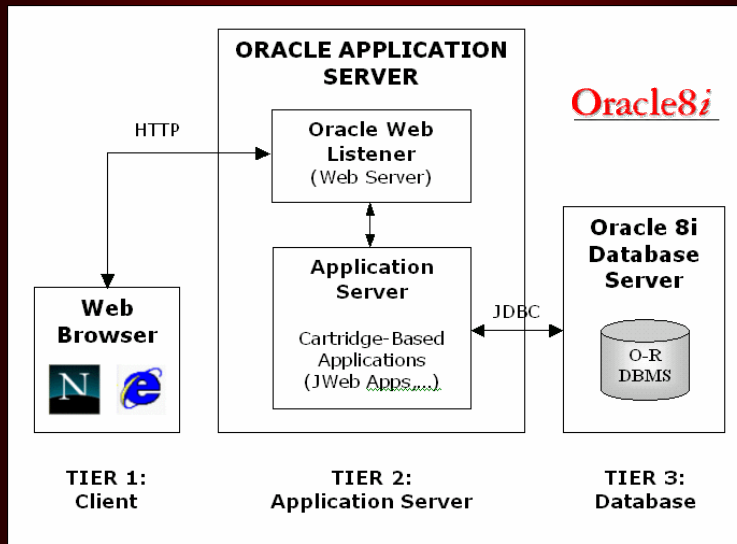

- Distributed web-based client-server application
- Build according to the 3-tier application model

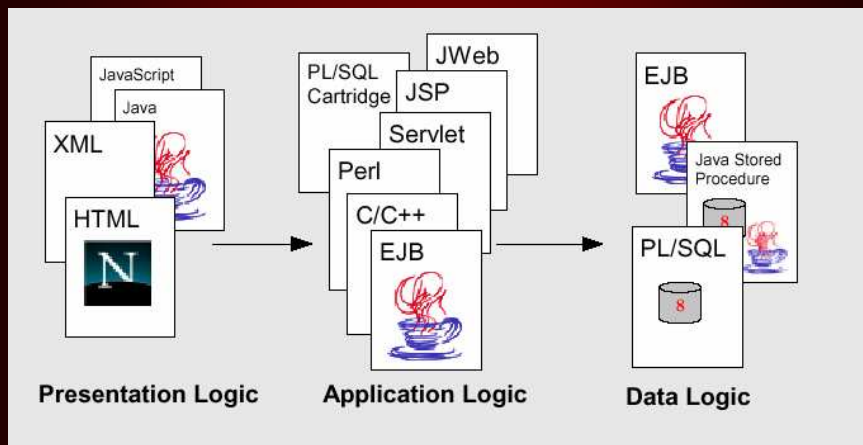

The MALL2000 Architecture

The MALL2000 Platform

Application Code Partitioning

Implementation Strategy

1. *JWeb cartridge-based* applications for the bulk of the application logic.
2. *JServer Java stored procedures* for intensive database operations.
3. User interface presentation logic on the thin-client using HTML+CSS, JavaScript, XML, DOM, etc.

Advantages and Benefits

1. Centralized configuration and management - simplifies maintenance and redeployment
2. OAS provides load balancing, fault tolerance, scalability, monitoring, logging, sessions, etc.
3. JServer provides for better performance, higher productivity and increased scalability

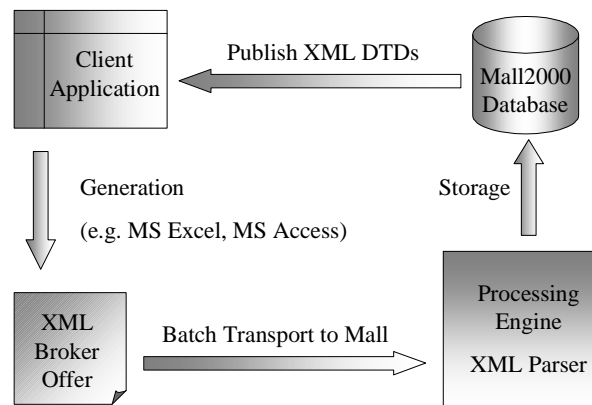

Accessing Oracle DB from Java

- *The JDBC API*
 - needed for dynamic SQL operations
- *The SQLJ API*
 - ideal for static SQL operations
- *The pl2java utility*
 - provides interface to PL/SQL applications

Oracle8i

XML-enabled DB interface

XML encoded offer

```
<BrokerOffer>
  <Cherries>
    <weight unit="kg">12000</weight>
    <availableFrom>1999/10/18</availableFrom>
    <fresh yes="" />
    <cherryColor item="red" />
  </Cherries>
</BrokerOffer>
```

XML support in Oracle8i

- *Oracle XML Parser*
 - SAX and DOM APIs supported
- *XML Support in iFS*
 - support for defining, parsing, and rendering of XML based file types
- *XML-enabled "Section Searching" in Context*
